Wheel-Stop Roller

Product information

The WHEEL-STOP ROLLER is a manual steel wheel chock with wheels, designed to help prevent truck and trailer movement during loading and unloading operations. Its wheeled design and integrated handle allow operators to position the chock at loading docks, while the visible STOP sign helps indicate that the vehicle is secured.

Best used for:

- Truck and trailer immobilisation at loading docks.
- Loading and unloading operations where unintended vehicle movement must be prevented.

Product benefits:

- Integrated wheels and handle simplify manual positioning and removal.
- Steel construction provides a robust structure for industrial loading dock applications.
- Ground-gripping teeth help prevent chock movement once positioned.
- Red STOP sign improves visibility of the wheel chock to drivers.
- Included 6 m anti-theft chain and wall anchor support secure storage
