

Binding Yarn PP

Produktinformation

Polypropylene (PP) binding yarn with a diameter of 2.2 mm is a practical solution for quick and convenient fastening and tying of insulation materials, especially mineral wool. Thanks to its polypropylene construction, it is lightweight, easy to handle and moisture-resistant, which makes it ideal for use on construction sites. The long 900 m length reduces the need for frequent spool changes and helps speed up installation.

Features:

- Intended use: tying and stabilising mineral wool
- Moisture resistant (does not absorb water)
- Convenient long length – fewer stoppages for spool changes
