

Shoring bar adjustable BC 1000daN

Produktinformation

The adjustable shoring bar BC 1000 daN is a reliable solution for securing cargo within the loading area. Designed for installation on the rear doors or within the curtain-side framework, it ensures stable and safe load restraint during transport.

Thanks to its adjustable length, the bar can be easily adapted to different cargo spaces. Rubber-coated ends increase friction, improving load stability while protecting the lashing rails from damage. The wide adjustment range makes it flexible, user-friendly, and suitable for various transport conditions.

It is an essential tool for transport and logistics operations where cargo safety is a priority.
