Smartbar 2.0

Product information

SMARTBAR 2.0 is a continuation of the development of SMARTBAR beams, specifically designed to protect sensitive products during transport and storage. It includes a black vinyl coating, planned to eliminate scratches on goods, reducing the risk of scratches and damage, especially on delicate surfaces such as glass. It also reduces vibration during transport. SMARTBAR 2.0 is a must-have solution that combines protection, durability and noise reduction.

SMARTBAR is a locking bar suitable for commercial vehicles, light and small vans (H1 models and all H2 types). The innovation lies in the locking capacity of 350 daN, as well as the simplicity of installation thanks to the spring pressure adjustment mechanism with a strap.

Features:

- Easy to use: lightweight, aluminum, easy to handle
- Easy to install: mounting strap at shoulder height, reduces musculoskeletal disorders (MSD)
- Environmentally friendly: recyclable aluminum, refurbishment available upon request
- Stability: black vinyl coating reduces noise during transport
