

Flexible reinforced Barrier ARIES

Product information

Aries is an advanced safety barrier designed for enhanced pedestrian safety in areas with heavy machine and vehicle traffic. Thanks to its reinforced design, the barrier effectively separates pedestrian areas from areas where forklifts, transport vehicles and other industrial machinery move. The product provides optimal protection for both workers and infrastructure in high-traffic spaces.

Aries consists of two flexible vertical posts, which are connected by four flexible cross (horizontal) barriers. This design provides stability and flexibility in the event of a collision, while minimizing the risk of serious damage to both vehicles and the barrier.

Using system joints or anchored installation to the floor with concrete screws, Aries is easy to install and ideal for a variety of industrial environments.

Material: Hard-Flexx® polymeric

Part code	Dimensions mm	A mm	Delivery time
53010055B	1200x1000	1,000	12
53010054B	1200x1500	1,500	12
53010053B	1200x2000	2,000	12
