

Flexible tall Barrier ARIES 2800

Product information

Aries 2800 is a modern flexible barrier from the renowned HARD-FLEX® series, representing a taller version of the standard Aries model. It has been designed to provide maximum protection for pedestrians, machinery, and warehouse infrastructure in demanding industrial environments. Thanks to its increased number of horizontal rails and elevated construction, Aries 2800 effectively safeguards both traffic zones and high storage areas.

Its design is based on flexible vertical posts connected by additional horizontal rails, ensuring exceptional stability and impact energy absorption. The barrier is installed using system connectors or by anchoring it to the floor with concrete screws, making the installation process quick and convenient.

Part code	Dimensions mm	Delivery time
53010058B	2800x1000	12
53010057B	2800x1500	12
