

Flat Clamp FZ

Product information

Due to the narrow jaw of the flat clamp, even horizontal panels can be erected. It is also no problem to pick up narrowly standing panels. The large transmission ratio guarantees safe panel transport.

- Great safety due to huge multiplication of 5:1.
- Web sling instead of chain/rope: low weight, no twisting, no injuries.
- The narrow jaw enables the putting down of upright plates or the erection of plates. Even tightly positioned upright plates can be gripped.
- No damage to the plate surface due to rubber coating.
- Spring tension prevents an inadvertent slipping down of the clamp.
- Easy handling by compact and convenient construction.
- Suitable for nearly all materials.

Marking: CE-marked

Safety factor: 5:1
