

Lashing Chain with Loadbinder 1-part

Product information

The chain lashing for securing cargo is made of Grade 8 (G80) components. All elements are permanently connected, ensuring fast and safe installation.

The lashing consists of one shorter and one longer chain section. One end is fitted with a hook, while the other features a tensioner connected to a shortening hook with a safety catch to prevent the chain from slipping out. The specially designed shape of the hooks ensures a secure grip, and the safety pin protects against accidental release.

Our chain lashings comply with EN 12195-3. The use of high-quality Grade 80 steel ensures both durability and safety during use.

Material: Steel

Marking: According to standard

Standard: EN 12195-3
