Track cover for Airline

Product information

Track cover for Airline is a snap-in cover profile that clips into the rail to prevent dirt and dust from accumulating inside the track.

- Track cover for Airline – a clip-in rail cover that limits contaminants from entering the rail.
- Easy to cut to length: the cover can be divided into several sections and placed side by side so that only the slots needed for load securing or blocking remain exposed, while the rest of the rail stays protected from dust and dirt.
- It also helps minimise the risk of scratching the cargo when it rubs against the rail. Storage is convenient, as the lengths can be rolled up.
