

Track Cover OMEGA

Product information

TRACK COVER OMEGA is a cushioning protective profile designed for Airline rails. It helps protect cargo from scratches and absorbs impacts and pressure that may occur during transport. The profile slides into the Airline rail, creating a flexible protective layer between the rail and the load.

Made of soft rubber, it adapts to the shape of the cargo, providing optimal protection for delicate surfaces. The product is supplied in a 25 m roll, making it easy to store and allowing quick cutting to the required length.

- Designed for Airline rails
- Protects cargo from scratches and absorbs impacts
- Slide-in profile for the rail
- Soft rubber – conforms to the cargo shape
- 25 m roll, easy to cut and convenient to store (can be rolled up)

Material: PVC
