Side pillar 4000XF 400mm

Product information

The Armaton 4000 XF side pillar with a height of 400 mm is a component of the platform pillar system, designed for installation inside the vehicle body. It provides additional structural reinforcement and dropside stability, improving the safety of transported goods.

Thanks to its optimized weight, the pillar allows maximum use of the vehicle's payload without adding unnecessary load. Its ergonomic design and well-thought-out construction ensure easy installation and convenient daily operation.

Made of anodized aluminum and high-quality components, the pillar offers excellent durability and resistance to operating conditions, while remaining virtually maintenance-free. The Armaton 4000 XF system ensures full compatibility with other body components.
