Adjustable Helicopter Lifting Beam TCR-T

Product information

The adjustable helicopter lifting beam TCR-T is a four-point lifting beam designed for handling loads that require stable, evenly distributed lifting. It is used with crane systems where fixed lifting points are not suitable and adjustable geometry is required. The design allows controlled positioning of lifting points to match different load dimensions and configurations.

When to choose this product

Best for:

- Loads requiring four-point lifting with adjustable spacing
- Applications with varying load widths or lifting geometries

Product benefits:

- Adjustable width and span supports multiple load configurations
- Four lifting points improve load stability and balance during lifting
- WLL range from 6t to 20t covers medium to heavy loads
- Manufactured in accordance with PN-EN 13155 and Machinery Directive 2006/42/EC
