

Loading Ramp AVS

Інформація про товар

These loading ramp have been specially developed for loading heavy construction machinery with steel chains, forklifts and work platforms. The running surface consists of a closed, non-slip aluminum profile.

The ramps are available in the following versions: with support tongue, hook-in, with pipe connection for a 60 mm shaft, foldable in the middle with support foot, or in two parts with separate foot.

A spring lifting mechanism is available for the permanently attached loading rails, which greatly reduces the force required for lifting and lowering.

| Код товару | Код | Load Capacity кг | Довжина мм | Ширина мм | Висота мм | Вара кг | Delivery time |
|------------|---------|---------------------|---------------|--------------|-----------|------------|---------------|
